EXPERIENCE

SOFTWARE / 3D INTERN 2 MONTHS · 2026

Institut de Recherche en Informatique de Toulouse

- Optimized a Unity-based 3D application for **WebGL deployment**, focusing on runtime performance and browser constraints.
- Built a **3D scanning and reconstruction pipeline** for campus buildings using drone imagery and Metashape.
- Optimized reconstructed 3D assets for integration into a real-time interactive environment.

VICE-PRESIDENT, TVn7 2025-2026

ENSEEIH T audiovisual association

- Coordinated an audiovisual association with €50K annual activity, managing projects, logistics and external providers.
- Trained new members and coordinated technical teams for audiovisual productions.
- Project management including interactions and negotiations with customers.

SELECTED PROJECTS

3D RENDERING ENGINE & OPENGL (JAVA/OPENGL)

- Implemented a 3D rendering engine from scratch in Java, transforming 3D geometry and camera parameters into rendered images.
- Explored OpenGL through hierarchical modeling, lighting and real-time 3D visualization.

CPU ARCHITECTURE & DIGITAL CIRCUITS (SHDL/ASSEMBLY)

- Designed and simulated combinational and sequential digital circuits using SHDL, a hardware description language developed for the course.
- Implemented a simplified Mini-CRAPS processor, studying datapaths, registers, control flow and instruction execution at the hardware level.
- Programmed and analyzed the processor using assembly instructions for arithmetic, logic, memory and control-flow operations.
